Mines and Prospects--Furnaces and Mills

The Month's Record in Open Market

proximate \$2,000,000, but Less Than Previous Year.

The month in the ore and bullion market closed on settlements aggregating \$1. 916,700, this exhibit compared with a total of \$2,036,810 for the corresponding period last year. Notwithstanding the figures to which the returns for the month certify show a shrinkage in the receipts of ore and the production of builtion compared with those of February, 1904, there is not a manager of one of the smelters, nor of a railroad over which the output of the digrings passes on its way to the furnaces, who does not testify to the tonnage that, at this time, is greater than at any period in the history of operations at either. If the record of previous years is correct, that of the present is weefully and provokingly inaccurate. Not a few, but a great many units, appear to have dropped out in the path from the plants to the statistician's desk but as data on which the record is made up is now released only under protest by those who make it, there is, perhaps, some guessing. The day's settlements in the open market amounted to 183,800 McCornick & Co. reporting them as they follow: Bullion, \$23,500; gold, silver, lead and copperores, \$4,000.

In the metal market silver ruled during the day at 90 cents an ownee, lead at to which the returns for the month cer-

lion, \$2,000 and ones, \$4,000 and ones, \$24,000 and in the metal market silver ruled during the day at 90 cents an ounce, lead at \$3.5694.45 per 160 pounds, and casting copper at 14% cents a pound.

CON. MERCUR TAILINGS.

Leaching to Begin Under New Lease on the Big Mass.

The active reduction of the gold-bearing tailings at the Con. Mercur's Manning mill will be resumed at once under a lease which was during the day awarded Messrs. Glaser, Erisco and associates, the company to derive its compensation from a royalty which was fixed by the board of directors. Mr. Brisco, who will have charge of the mill, was until about two years ago foreman of the main mill at Mercur, where he mastered the process of cyanidation, and that he will maintain the profits that have been shown by his predecessors the management of the company has no doubt. Remaining in the tallings dump is a vast amount of tallings, and, with close work and a heavy tonnage, there should be good money for the lessees as well as the company. The season in which leaching of the mass is possible has opened several weeks ahead of the average one, and the run should be a long and profitable one. Meanwhile the company is materialning a steady output of gold-bearing ore, and, while not results are not as large as in the early days, a piece of money is each month being added to the surplus, while the condition under ground has during the year shown not a little improvement. mill will be resumed at once under

BOSTON CON'S CONDITION.

Manager Johnson Much Pleased With Its Behavior.

The condition at the properties of the Boston Con, of Bingham has never been more favorable to greatly increased earnings, said Manager Morris M. Johnson, on his return from camp, and that the expectation of all interests shall be realized is now positively assured. At present there is being forwarded to the furnaces of the Bingham smelter an average of 150 tons of ore daily, while this will be increased as soon as the management of the smelter indicates a willingness to receive it. In the southern territory, which is now being actively explored, the cross-cut through which connection was recently made with a new south channel has passed through no less than twenty-five feet of copper-bearing sulphides to the footwall. The average contents of the ore which has been opened up along this meridian compares favorably with that which has characterized the older stopes in the mine, while that occurring in the channel of carbonate ore, twenty feet north of the sulphides, reveals an average of about few of the sulphides, more favorable to greatly increased earnore, twenty feet north of the sulphides, reveals an average of about 6 per cent, with considerable gold and not a little silver. With the behavior of everything at the properties Manager Johnson is very much pleased.

THE SWANSEA LEASES.

Some Ore Coming to the Surface From Old Workings.

While the forwarding of ores has not yet begun, the lessees at the properties of the Swansea company, Tintle, are gradthe Swansea company, Tintle, are gradually getting a lot that promises good values in silver and lead to the surface, this coming from the old workings of a property that has been productive of over \$500,000 in dividends, and from which the management expects to earn more before its resources have been exhausted. Ready for the furnaces when the market shall justify it is a large volume of pyritic from, containing some silver, and, with the company permitted to handle this at a profit, there is employment there for quite a force of miners.

LEFT FOR PIOCHE.

New Manager of Utah-Nevada Departs for Mines.

scheduled, Manager Milliken of the Utah-Nevada company, departed for the diggings last night, with the Manhattan diggings last night, with the Manhattan group of mines the first point in his itinerary. Accompanied by Mr. Freudenthal, the work there will be prosecuted as rapidly as conditions shall permit, nor is it at all unlikely that the movement of ores from that source will start before the leaves begin to brown again. Mr. Weir, the president of the company, is now scheduled to reach the company's general offices in this city on March 12.

TABLES IN MOTION

Concentrates Now Coming From Ores of Cactus Group.

The big battery of tables at the Newhouse mill in the southern camp is now in motion, said Mine Manager Johnson, who motion, said Mine Manager Jehnson, who boarded the train for that region last night, and the active production of concentrates finally begun. While it is no servatism that has ever characterized the management, it was said yesterday that the metallic contents of the ore are exceeding the average that Mr. Johnson said would be maintained by him, the earnings at the start correspondingly increased, and that the present average will be continued there is scarcely a doubt

TEA

Tea is for taste and rest; but there isn't much of either in common tea.

Your grocer returns your money if you don't like

MONTH ON 'CHANGE,

Trading Was Light, but Market Showed Some Strength.

Showed Some Strength.

The month on the mining exchange closed on an output of 406,202 shares of stock, for which \$165,202.45 was paid; the day on the saie of 12.429 shares, that responded to the jingle of \$2572.75. While the record for February was characterized by light trading, the market generally was not without its improvement, and the more active traders at the close yesterday had sustained no serious losses. Ajax, indeed, did some sprinting on favorable reports from new work in hitherto unexplored territory, while Tetro, which had climbed up to 20 cents the previous day, retained its position, with May Day in active demand around 13 cents. New York, with the contents of its counters reduced to 160 shares, changed hands at 12 cents, and Yankee Con. at 35 cents, while Lower Mammoth was traded in at 10 and Silver Shield at 12% cents. In the sparring Daly was bid up to \$2.55, with the shopkeepers decitning to put a price on its shares at either of the sessions, while the Judge refused to come off its betch at less than \$7.00 Daly West to play at less than \$7.25. Eagle and Blue Eeli was marked up several points in the bidding, as was Mammoth, while Grand Central closed an offering at \$3.25, with \$1.85 asked for Victoria, the day and month closing on the following market.

Not Stirring at Present. The stationary condition of Utah Con and United States Mining, say Hayden Stone & Co of Boston, is doubtless accounted for by the fact that the New York interest, who were quite a factor in this market up to December, are practically doing nothing at the moment, although they are still large stem alders in both companies.

Uncle Sam Sends Big Lot of Ore

Sampler-Developments on New Channel.

l'aylor & Brunton sampler were no fewer than five carloads of ore from the Uncle Sam, a consignment that is reminiscent of a period when the property was among the most productive of Tintic's breadwinners. A portion of the ore contained in the lot is from the latest development In the winze below the 300-foot level, the remainder from other and older stopes. Included in it also is a carload that should not the consignor as much, if not more, than \$1000, while the whole will add more, than \$1000, while the whole will add a considerable sum to the treasury. Of developments in the new channel on the east of the main dyke, and which opens possibilities that may culminate in a new mine, the management has had but little to say for several days, although it is said by arrivals from camp that the condition continues to improve with every shift, with some clean galenn, running quite well up in eliver as well as lead, mixed with the carbonates. The condition throughout Godiya mountain, indeed, shows much improvement, while there is greater activity there at this time than greater activity there at this time than tion throughout Godiva mountain, indeed, shows much improvement, while there is greater activity there at this time than has there been at any period in several years. The May Day, the Yankee, the Godiva and the Beck Tunnel companies are all doing a great deal of development in new territory, and important disclosures are confidently relied on the present season, while the record for the previous week shows a material increase in vious week shows a material increase in the production of ore from the various

properties. It is the impression that the Robert D. Grant will inaugurate work on the Sloux and Utah mines the present year, and with a large amount of virgin territory yet in these properties, the outlook there is equally assuring.

Gold Ores Now Fenced in and Under Armed Surveillance.

SIMMERONE A MARVEL

A correspondent, writing from the great camp of gold in the West, says:

"In all the wonderful gold mining disin all the wonderful gold mining district of Goldfield, Nev., there is no more remarkable mine than the principal on on the group belonging to the Simmeron company. There the ore is of such fabulous value that the property has been inclosed by a high board fence, heavy binges and padlocks placed on the gate and a well-armed guard stationed inside to watch it night and day while the miners delve for the gold.

and a well-armed guard stationed inside to watch it right and day while the miners delve for the gold.

"The Simmerone is located two miles north of Goldfield. The ledge struck is several feet in width and runs from force to \$50,000 in value per ton, small pockets liaving been found that are even more valuable. When this rich shoot was first discovered, visitors were in the habit of filling their pockets with "samples." which they would later pan out and get gold buttons valued at from \$10 to \$20. This practice became so common and the fear of an organized raid became so fear of an organized raid became a strong that the property was fenced in although at heavy cost, lumber being very high in Goldheid. "Eyery ton a

Every ten days sacks of this ore are expressed from this mine, heavily guarded, to be milled, and already the company is very wealthy, although the mine is only down fifty feet. The company is a close corporation, with nothing for sale. Development work is being pushed rapidly, and it is thought that within a short time the full value of the property will be known.

be known.

"There are other very rich mines in Goldfield, some of them having ore that runs even higher than that on the Simmerone, but although all are carefully guarded, this is the only one thus far that has been fenced in Every day new strikes are reported and the district bids fair to sellipse every other in the world's mining history."

The several Salt Lakers who invested in the Simmerone's shares when they were first offered have been percentical.

tered have been permitte mark up big profits, and in present de opments there is much local interest

FOUND GOLD MINES.

Salt Lake Mining Man Makes a California Discovery.

Charley Charlton, who shook the dust of Utah's disgings from his shoes to seek the camps of Nevada has returned after the camps of Nevada has returned after an absence of several months. Although Goldfield was his original destination, and while he found much there to impress that camp, Mr Chariton extended his researches into California, and in Owens valley on the margins of Meadow lake, has acquired a group of localities that promise to provide him, as soon as transportation shall have arrived, with the wealth of gold of which he has all these years been dreaming. While there is some very rich ore in the ledges staked off by him the merits of the proposition are in the large volume of milling ore, and with a plant on the ground, he has no doubt of making it a very productive one. He will return West after a brief visit with his family in this city to continue development.

GEORGE GUNN RETURNS.

Good Feeling in the East Toward Western Offerings.

George Gunn, representing the American Smelting and Refining company in the field, and who is as familiar with the field, and who is as familiar with the trails and pathways into the world of Western wealth as is the man who biazed them, came in from the East during the day and last night left for Callente, on the line of the San Pedro. From that station he will again push into the diggings that promised not a little when he visited them several months ago, and at a later day will repeat the journey along the marvelously mineralized strip of country between the new railway and the region of which Goldheld is the present center. In Boston, which city was included in his pilgrimage through the East Mr. Gunn reports a most favorable feeling toward the resources of Utah and neighboring States, with much capital to take hold of the meritorious at all times.

TO TURN ON WATER.

Big Mining Men Come West and Hur-

Messes P L Kimberly and Frank Buhl to whose liberal and courageous support a measure of gratitude that shall not be easily discharged, no matter how freely the properties operated by them shall respond, came in from the East during the afternoon, and last night departed for the big plant which has been installed on the Snake river, idaho, by the Twin Falis Land and Water company, accompanied by Messrs C. O. Ellingwood and Gideon Snyder. There the gentlemen will be received by Manager Walter G. Filer and his staff, and today the waters will be turned into the ditch for the first time. On their return to Utah the Messrs Kimberly and Buhl will visit their interests in the Honerine mines and mill at Stockton, and the Annie Laurie at Kimberly. the mining industry in this State owes

February's Output of Copper Bullion

to the Refineries of the Far East.

While the keepers of seals and records o longer permit the public nor the press help itself to data relating to the out ut of copper from the producers of the State, there was forwarded from the fursaces of the valley to the refinerles of the East during the month which came to a close last night, approximately 5,000,000 peunds, this including that contained in the matte produced at the American's Murray plant. According to authorities, who appear to have arrived at conclusions reasonably accurate, there is now being produced in the State about 165,000 peunds of copper, containing silver and gold, daily, and that this will be exceeded long before the close of the year is as yell assured as it is that the record for the year will exceed that of the previous one. In a short time the management of the Yampa's plant in Bingham canyon will double the present production, while no one conversant with the plant has the least doubt that the management of the Yampa's plant in Bingham canyon will double the present production, while no one conversant with the plant has the least doubt that the management of the year. To these sources, on which the consumer may rely for an increased supply, has just been added the Newhouse mines on the south, while the volume of copper ore continues to show a steady increase in all the camps in which it is an element of production. That the output of that metal in the State during the year shall be made to exceed the most liberal guesses is not at all unlikely. East during the month which came to a

MONTANA-TONOPAH. Sixty-Ton Shipment Nets the Com-

pany a Big Sum.

week over there, says;
Donald R. Gillies, general manager of the Montana-Tonopah company, has received the returns from the sixty-ton shipment of ore, made several days ago to Reno, and they are certainly remarkable, the chipment netting £5,000.

The ore shipments via the Tonopah rail-road for the week ending yesterday were as follows: Tonopah Mining company, 946 tons; Tonopah Eelmont, 36 tons; Montana-Tonopah, 175 tons; Tonopah Extension, 246 tons; Midway, 46 tons; Jumbo, 22m lease, 20 tons; Combination, 6 tons; Florence lease, 75 tons; McKane lease, 77 tons. week over there, says:

TRAMWAY FOR POTOSI.

Big Lead-Silver Mine Off the San Pedro to Install One.

Fred T. McGurrin will leave for the outhern country again today, and by way of the Potost group of lead-silver way of the Fotosi group of lead-silver mines recently sold to Mahoney Bros., San Pedro contractors, will pentrate some of the older camps that have been waiting on transportation to assert their productiveness. At the Potosi, of which Mark Hopkins has been made the manager, an aerial tramway is to be installed between the bins and the loading station at the bottom of the hill, said Mr. McGurrin, and with this in operation the active forwarding of ores will begin. He esteems the Potosi as the making of a very productive property.

MAY DAY'S GAIN.

New Working Charge Will Permit Heavy Tonnages.

Concessions obtained by the manage-nent of the May Day of Tintic from the American Smelting and Refining company, and which, it is said, become ef-lective at once, will undoubtedly add ma-certally to the value of every interest. Not only, according to a statement by one of only, according to a statement by one of the heavier interests, during the after-noon, will it erable the management to add to the margins on first-class ore, but under the modified schedule it will be per-mitted to forward direct to the furnaces a large volume of ore that has been ac-cumulating in the mines and materially increase the earnings. Active production of ores of this class will begin at once.

Boston Market Dull.

Special to The Tribune.

BOSTON, Mass., Feb. 28.—The Boston market was again dull but heavy. Shortly after the opening a seiling movement set in, in sympathy with the drive made at the New York market, but these offerings were well abserbed and a rally followed, only to sgain sell off in the afternoon. Sentiment regarding the copper shares continues cheerful, but the demand does not materially increase and the tendency is rather to follow the trend of the New York market, especially if a weakness is abown. The closing tonight was heavy. Hornblower & Weeks, brokers, id State street, Boston, and to Wall street, New York, furnish the following quotations.

Like the Boston Con.

There has been a tendency on the part of local houses of late to bid up the price of Boston Consolidated shares, says the Commercial Bulletin of Boston Offerings of stock however, have been limited, owing to the belief that the company will be able to make a comparatively satisfactory showing during the present year. At present the company is shipping to the Bingham Consolidated smelter tons of ore per day, the profit to the Doe tons of ore per day, the profit to the Boston Consolidated on which is said to be close to 55 per ton. Moreover, it is understood that these shipments can be maintained indefinitely, although no doubt rendered easy at present by the accumulated supplies.

Mining Notes.

Charles H. Doolittle, manager of the Bing-aam & New Haven, has returned from camp Manager Henry M. Crowther of the Conti-cental left for its Alta properties yesterday John W. Langley, for many years a promi-nent broker and mining man in this State, has opened offices at Tonopah. B. F. Rooser of the Bingham Con. smelter came up from the furnaces yesterday to con-er with the management.

fer with the management.

The Mammoth of Tintic yesterday marketed ninety-serven tons of ore on controls showing \$10.50 gold, with 10 ounces silver per ton.

Harrison Clement, to whose firm was recently awarded the contract for the Lost Packer smelter, has returned from Denver, Colo. F H. Lathrop, manager of the Tonopah Belcher, has announced that the company is ready to let a lease on its property out of Tonopah.

Charles L. Lawton, Superintendent of the Bingham Con s Dalton & Lark group of mines, was among the visitors from that camp dur-ing the day.

he II4-foot level is out about 90 feet and he suitre distance shows three feet of \$200. A carload of ore reached the Salt Lake slers early this week.

J. C. Hersch, Plumbing and Heating, 118 W. 2nd So., opp. Postoffice.

FLAYS THE LOBBYISTS.

Gov. Mead of Washington Reads Riot Act in Veto Message.

that Gov. Mead has vetoed the bill for the removal of the State capital from Olympia to Tacoma. His principal reason is that the bill is in the nature of a constitutional amendment, and as such should have a two-thirds' vote of the Legislature. In his veto message, the Governor flays the lobbyists

The State Senate has declined, by a vote of 15 to 19, to pass the capital removal

In the State Senate this afternoon Senator Baker introduced a concurrent reso lution providing that the question of capital removal be submitted to the people at the next general election. This was quick-ly rushed to its second reading. Should it pass it cannot be vetoed by the Gov-ernor.

CENTER SALOON.

YOUNGBERG & PERRY, Proprietors,

J. W. CURRIE. m W. 3rd South, Sait Lake City.

NGTICE TO WATER USERS.

State Engineer's office, Salt Lake City, Utah, February 2, 1906.

Notice is hereby given that James J. Chambers, whose postoffice address is 350 Breadway, New York City, New York, has made application in accordance with the requirements of chapter 100, Sension Laws of Utah, 1903, to appropriate thirty (30) second-feet of the water flowing in Big Cottonwood creek, Salt Lake county, Utah. Said water is to be diverted by means of a dam and a pipe at a point which is immediately below where the tail race of the Maxield Mining company's power plant has its confluence with said Big Cottonwood creek, which point hears south 62 degrees 59 minutes west, 760 feet distant from the northwest corner of section 18, township 2 south, range 3 cast, Salt Lake base and meridian, from where the water will be conveyed for a distance of about 35,00 feet and there he used from January 1 to December 31 inclusive of each year, for developing power for electric lighting and to propel machinery in Sait Lake county. After having been so diverted and used the water will be returned to the natural channel of Big Cottonwood creek at a point which bears south 67 degrees 28 minutes west, 23,820 feet distant from the northwest corner of section 18, township 2 south, range 3 cast, Sait Lake base and meridian.

All protests against the granting of said

All protests against the granting of said application, stating the reasons therefor, must be made by affidavit in duplicate, and filed in this office within thirty (30) days after the completion of the publication of this notice. A. F. DOREMUS.

Date of first publication Februar date of completion of publication March 6

NOTICE TO WATER USERS.

State Engineer's office, Sait Lake City. Utah, February 2, 1965.

Notice is hereby given that James J. Chambers, whose postoffice address is 350 Broadway, New York City, New York, has made application in accordance with the requirements of chapter 100, Sossion Laws of Utah, 1903, to appropriate the equivalent of thirty (30) second-teet of water flowing for a period of thirty days from Big Cottonwood creek, Sait Lake county, Utah Said water will be stored during the flood and winter sessions in a reservoir made by constructing an earthen dam in the natural channel of Big Cottonwood creek just below "Mill D." at a point which bears south 65 degrees west, 1250 feet distant from the southwest corner of section S, township I south, range 3 east. Sait Lake base and meridian. The water will be subsequently released, conveyed through a pipe for a distance of 35,600 feet and used for developing power for electric lighting and to propel machinery in Sait Lake county. After having been so used the water will be returned to the natural channel of Big Cottonwood creek at a point which bears south 67 degrees 23 minutes west, 23,250 feet distant from the northwest corner of section 18, township 2 south, range 3 east, Sait Lake base and meridian.

All protests against the granting of said application, stating the reasons therefor, must be made by affidavit in duplicate, and filed in this office within thirty (30) days after the completion of the publication of sampletion of subjection Means 4.
